SecureChainCon

Hosted by the Ortelius
Open-Source Community

The ultimate online micro-conference for
DevOps & Security practitioners

Stay ahead in the rapidly evolving world of Software Security & DevOps Automation.

Welcome to SecureChainCon, the ultimate online conference designed to foster knowledge sharing, and explore the challenges of implementing software supply chain security practices into fragmented, decoupled architectures. Topics of sessions and workshops presented by expert practitioners include forensic gathering, open-source tooling, and real-world use cases for integrating security into DevOps workflows.

SecureChainCon

ORTELIUS
Hosted by the Ortelius
Open-Source Community

Why Attend:

- Connect and share with your Peers
- Hear presentations by expert practitioners
- Learn about supply chain security in decoupled architectures
- Explore use cases from leading companies with their latest innovations and gain insights into the future direction of software supply chain management
- Attend for Free, or View On-demand

Key Takeaways:

1 Shift Left Security
Understand the importance of integrating security practices early in the software development lifecycle (SDLC).

2 Automation is Key
Learn the role of automation in DevSecOps, to improve efficiency & consistency.

3 Culture of Collaboration
Recognize the need to foster collaboration and shared responsibility among development, operations, and security teams.

4 Threat Intelligence & Risk Management
Explore the importance of leveraging threat intelligence and risk management.

5 Compliance & Governance
Address the challenges of maintaining compliance with regulatory requirements.
